

NetNordic Security Operations Center

A security service that seamlessly integrates with your IT-environment

NetNordic's service ensures your company's cyber security through top-tier experts and advanced technology - with full cost transparency.

Major challenges in managing Cyber Security today

The alarming amounts of cyber security threats companies are facing today have grown the need for tools such as SIEM and Centralized Log Management and prompted the demand for continuous monitoring and preventative actions.

NetNordic SOC is an all-in-one security solution that works 24/7/365 in order to ensure the security of your entire organization.

The service is built to integrate seamlessly with the current IT environment of your business and it includes both all needed technology and the cyber security experts - without any separate license fees.

Instant access to expertise, technology, and scalability

NetNordic SOC solves your security dilemmas by providing the following assets to your company:

An ISO 27001 certified solution that covers the whole infrastructure, clouds, and third-party solutions.

Access to top-tier cyber security experts that monitor your data 24/7/365

A centralized log management view for all the data traffic in your company

The service enables you to identify leaks and misuse in no time - making it possible to react on threats quickly

Increased cost-predictability, as the service works at a fixed and transparent price

An endlessly scalable service that is made to grow with you - no matter how big your company gets

Experienced Cyber Security Experts working 24/7

NetNordic's Security Operations Center is a comprehensive service for cybersecurity monitoring and provides first-class protection for organizations that enables real time response to various information security anomalies.

By combining advanced technology, experts, and an innovative tier-model of working, your company is protected against the abuse of information processing systems, data breaches and data leaks. Your security operations are monitored around the clock at our on-site Security Operations Center.

Security Operations Center model

- On-site 24/7
- Real-time analysis & categorization
- First contact resolution
- On-site 24/7
- Threat hunting
- Development proposals
- Long-term analysis & follow-up
- Incident Response team remote
- On call 24/7
- Incident Response team on-site

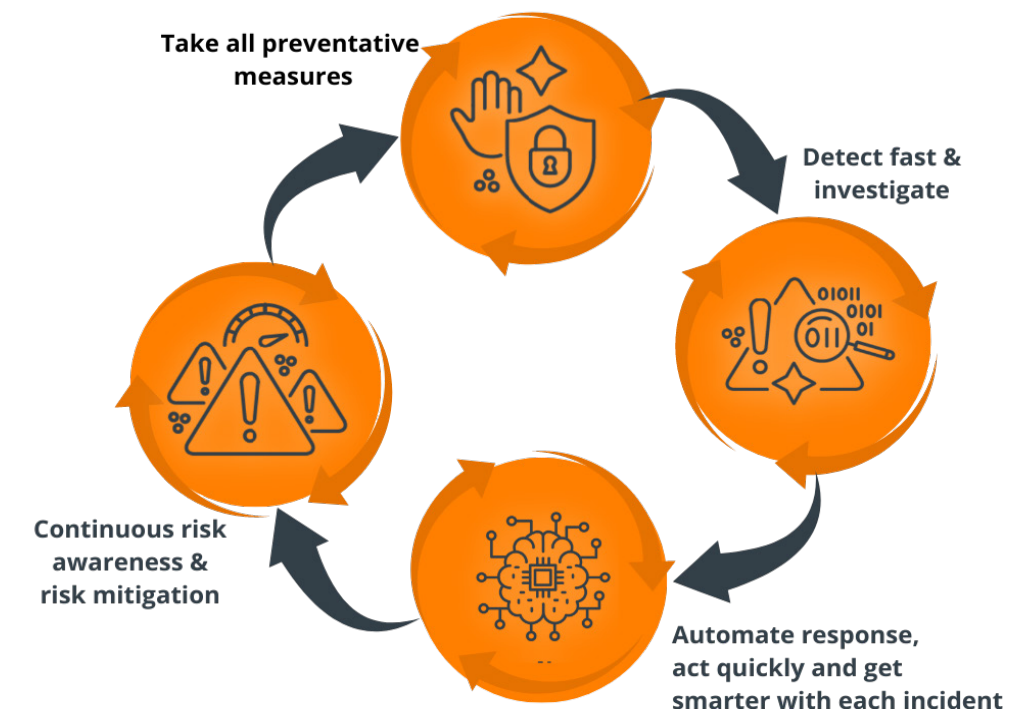

NetNordic Security Operations Center Managed Security Services - a complete service model

NetNordic has developed a risk-associated working model for proactive security work that is based on radically reducing the risks of being seriously affected by a cyber attack combined with advanced ability to detect cyber attacks. The model is based on the foundation of strong prevention, strong analytical ability to quickly detect and investigate threats, and to effectively act and automate measures against attacks.

A continuous "learning loop" and process for risk understanding ensures that NetNordic and the customer have a common basis to use for risk mitigation and reporting to business management.

The NetNordic SOC is provided as a continuous service that includes personnel resources that have all undergone security clearances, hardware, licenses, support and maintenance services and 24/7 monitoring.

Our service is built on full transparency. Together with regular reporting we give you access to your company's real-time data and audit trail in our Customer Portal.

212 days is the average time it takes for a company to **detect** a cyber security incident (*Upguard, 2022).

NetNordic SOC detects and *reacts* within minutes.

NetNordic Security Operations Center

First-class protection for organizations

Our Security Operations Center Detects and Responds to all threats for you!

For a good working environment, where the experts' knowledge is really used and continuously developed - the traditional way of organizing a SOC simply does not work.

All SOC's have in common the task of detecting, analyzing and counteracting cyber attacks and incidents. Most solutions only give value in notifying you about these attacks. **NetNordic SOC goes beyond reporting on security incidents.**

NetNordic SOC differs from the traditional service desk SOC in several ways in regards to methodology, transparency and the underlying safety technologies and processes that enable the work.

We aim to be your best cyber security companion. Through continuous communication and smart automations we work to enhance your team's security knowledge whilst minimizing all security risks in your IT infrastructure.

By collecting log data from both systems, software and network devices, we are able to analyze your organization's network traffic in real-time and advise on important improvements. We keep you updated and informed with monthly development meetings.

When we detect any potential leaks and misuse, we'll aid you in reacting quickly to stop any intruders. Whether it's preventing, detecting or reacting on threats...

- we are here for you every step of the way.

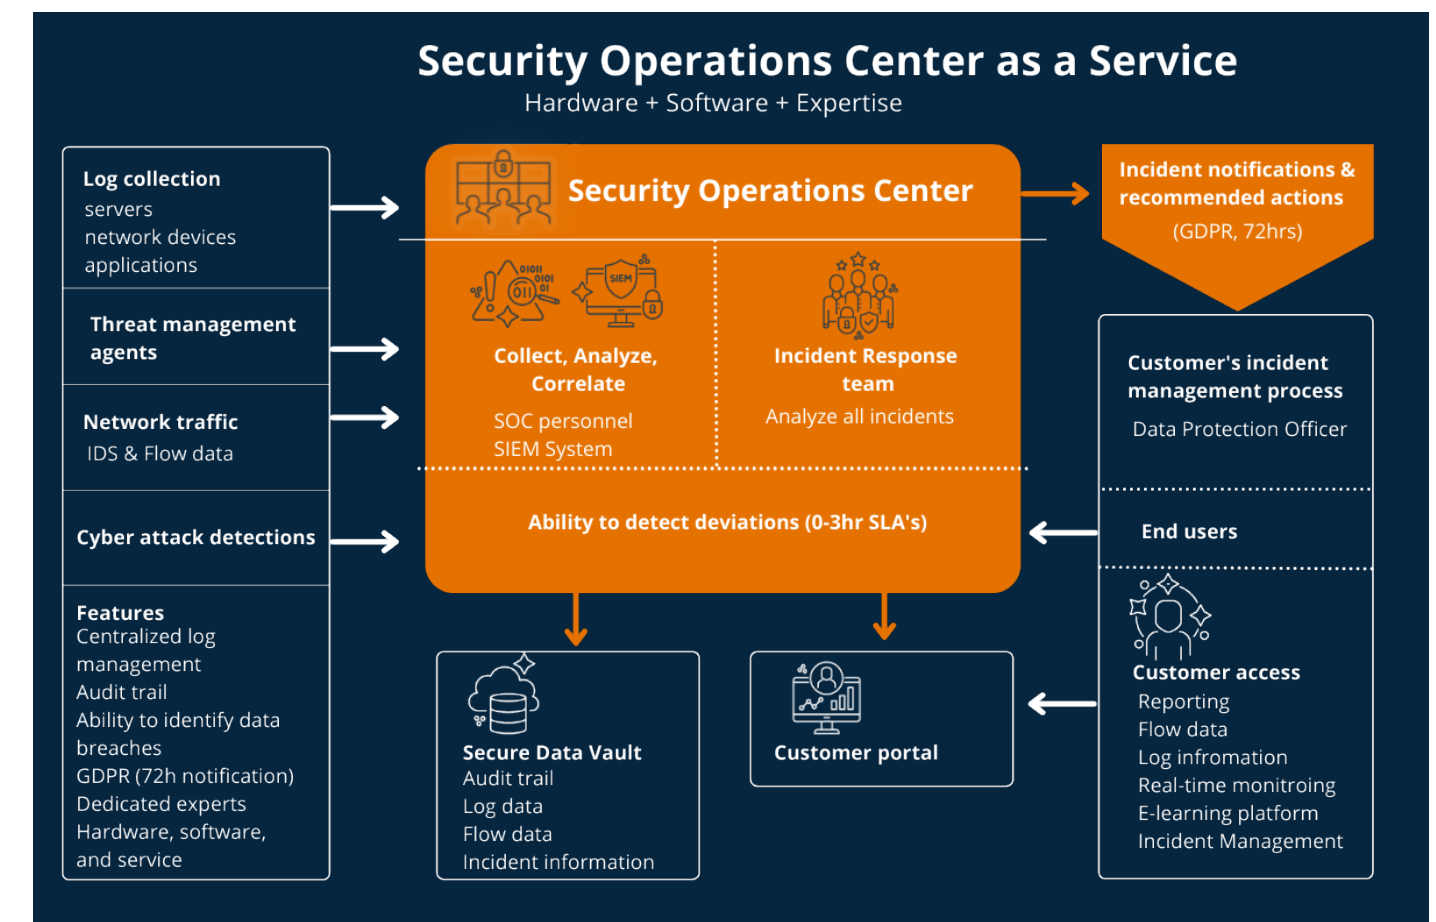

TRADITIONAL SOC

- Detect, react & recover
- With an increase in incidents the need for staff increases exponentially
- Threat insights are manually translated into protective policies and configurations
- Based on point products that are difficult to integrate leading to long implementation projects
- High license costs leading to overpriced SOC and SIEM services

NETNORDIC SOC

- Prevent, automate & protect
- Full scalability
- Threat insights are automatically translated into protective policies and configurations
- Integrates seamlessly to your IT environment
- Centrally managed agents with data model data processing
- Centralized service to reduce the risk with transparent price and service model.
- Full SIEM access and one view for all log data.

Would you detect an attacker
inside of your IT environment?
